---

Experience

Freelance Developer and Data Specialist, Aug 2023 - Present

- Engineered custom data structures and systems to meet specific client requirements, enhancing overall project efficiency.
- Developed an indie game in Godot 4.3, focusing on dynamic, context-sensitive systems for UX as well as loot table processing through data-driven programming.
- Delivered maintainable inventory systems that streamlined stock tracking and client item storage.
- Created organized catalogs based around user input, allowing for high quality and dynamic UX pages.

Telus International - Search Engine Result Rater, Sep 2025 - Present

- Assessed landing page structures based on user engagement data in order to rate page quality and enhance overall SEO.
- Utilizing SEO logic to understand the needs of search users, providing advice to pages to better fit those needs.

Appen - Search Engine Optimization Analyst, Aug 2022 - Aug 2023

- Analyzed search query patterns to identify optimization opportunities, leading to enhanced ad relevance and improved landing page performance.
- Evaluated keyword trends to develop targeted content strategies, resulting in increased visibility and traffic.

Terc Capital - Developer, Aug 2021 - Aug 2022

- Engineered robust databases to enhance backend optimization, resulting in improved system performance.
- Developed a secure, user-friendly front-end portal which enhanced data security and user access.
- Applied problem solving techniques to optimize database design, contributing to overall application efficiency.
